

AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior listing of claims in this application.

1. (Previously presented) An information display method for displaying information about a plurality of users registered in a server, on a terminal of a user of the plurality of users, via a network, the method comprising the steps of:

transferring information about the plurality of users from the server to the terminal of the user; and

differently displaying display contents of information about each user displayed on the terminal of the user, on the basis of registration contents of information about the user, wherein the information about each user includes a file for describing a model in place of each user within a virtual space shared by the plurality of users, and the virtual space where the model corresponding to each user exists is displayed at the terminal of the user, and wherein the information about each user includes an interest level of each user in at least one item, and a figure of the model at the level of each user is differently displayed based on a user's interest level about the item.

Claims 2-3 (canceled).

4. (Previously presented) The information display method according to claim 1, wherein at least one model of a virtual character prepared by the server exists within the virtual space.

5. (Previously presented) The information display method according to claim 1, wherein the information about the plurality of users is retrieved according to

predetermined extraction conditions set by the user so that a user satisfying the extraction conditions is extracted.

6. (Previously presented) The information display method according to claim 5, wherein the model corresponding to an extracted user is displayed, and the model corresponding to an unextracted user is not displayed.

7. (Currently amended) The information display method according to claim 5, wherein the information about at least one extracted user(s) user are displayed as a list.

8. (Original) The information display method according to claim 5, wherein the user is able to set the extraction conditions in the case where the user has in advance a specified permission from a manager of the server.

9. (Original) The information display method according to claim 5, wherein the user is able to set the extraction conditions in the case where the user has in advance a permission of sales activities within the virtual space from the manager of the server.

10. (Original) The information display method according to claim 5, wherein the manager of the server charges to the user for the setting of the extraction conditions by the user.

11. (Previously presented) The information display method according to claim 5, wherein an extracted user is able to charge to another user communicating with the user within the virtual space.

12. (Original) The information display method according to claim 7, wherein the extracted user is able to charge to the user for displaying the list including the information of the extracted user.

13. (Currently amended) An information display system comprising:

a server for registering information about a plurality of users, and

at least one terminal connected to the server via a network, the terminal being

of a user of the plurality of users for displaying information about the plurality of users,

wherein the server ~~transferred~~ transfers the information about the plurality of

users to the terminal of the user, and the terminal of the user differently displays

display contents of information about each user on the basis of registration contents of

information about the user, wherein the information about each user includes a file for

describing a model in place of each user within a virtual space shared by the plurality

of users, and wherein the virtual space where the model corresponding to each user

exists is displayed on the terminal of the user, and wherein the information about each

user includes an interest level of each user in at least one item, and a figure of the

model at the level of each user is differently displayed based on a user's interest level

about the item.

14. (Canceled).

15. (Currently amended). A game method for communicating via a network

with a virtual character presented by a server, the method comprising the steps of:

preparing parameters of each of a plurality of users communicating with the

virtual character, wherein the parameters about each user includes a file for describing

a model in place of each user within a virtual space shared by the plurality of users, and

the virtual space where the model corresponding to each user exists is displayed at the

terminal of the user, and wherein the parameters about each user includes an interest

level of each user in at least one item, and a figure of the model at the level of each user is differently displayed based on a user's interest level about the item; and

varying the parameters of each user depending on the progress of communication of each user with the virtual character, wherein said virtual character has information about each of said plurality of users; and

informing each user a response from the virtual character corresponding to the parameters by an electronic mail at a predetermined timing.

16. (Currently amended) An information display method for displaying information about a plurality of users registered in a server, on a terminal of a user of the plurality of users, via a network, the method comprising the steps of:

transferring information about the plurality of users from the server to the terminal of the user; and

differently displaying display contents of information about each user displayed on the terminal of the user, on the basis of registration contents of information about the user, wherein the information about each user includes a file for describing a model in place of each user within a virtual space shared by the plurality of users, and the virtual space where the model corresponding to each user exists is displayed at the terminal of the user, and wherein the information about each user includes an interest level of each user in at least one item, and a figure of the model at the level of each user is differently displayed based on a user's interest level about the item.
